

- Unemployment rate climbs to highest level in six years, rising to 8.3% in October
- Building permits drop in September
- Aquaculture production remains stable in 2008

### Labour Force

- **British Columbia's unemployment rate jumped to 8.3% (seasonally adjusted) in October, reaching its highest level since September 2003.** With the latest increase in the jobless rate, the incidence of unemployment in BC is now only marginally lower than the Canadian average (8.6%).

The increase in BC's jobless rate was driven by a drop in employment (-0.6%, or a loss of 12,900 jobs) combined with an 8,100-strong increase (+0.3%) in the number of people who were either working or looking for work.

October's decline in employment reversed most of the job gains in September. Job losses were concentrated in the goods sector, where employment fell 2.0%. Workers in manufacturing (-7.2%) were particularly hard hit. Construction (-0.3%) employment inched back as well, but other industries in the goods sector were hiring workers.

In the service sector, job losses were modest (-0.2%) and were concentrated in a few industries, primarily information, culture & recreation (-3.3%), educational services (-2.1%), public administration (-1.7%) and retail & wholesale trade (-0.9%). The accommodation & food services industry posted a second month of solid job growth (+1.6%) after reducing its workforce earlier in the year.

Employment was down in both the public (-1.3%) and private (-1.4%) sectors, but self-employment increased significantly (+2.8%).

The number of full-time jobs was unchanged from September while part-time employment shrank 2.5%.  
*Data Source: Statistics Canada*

- **The Canadian unemployment rate inched up to 8.6% in October, with a decrease of 43,200 (-0.3%) in the number of people with jobs.** Jobless rates were up in all but two provinces. Saskatchewan (5.3%) and Manitoba (5.8%) continued to have the lowest unemployment rates in the country.  
*Data Source: Statistics Canada*

- **Among the regions, unemployment rates were lowest in Northeast (7.2%, three-month-moving average), Thompson-Okanagan (7.3%) and Mainland/Southwest (7.4%).** Unemployment rates remained well into the double-digits in Cariboo (11.5%) and North Coast/Nechako (10.0%).  
*Data Source: Statistics Canada*

- **The jobless rate among Aboriginal youth (aged 15-24) in October was 22.9% (3-month moving average, unadjusted), 9.4 percentage points higher than a year earlier.** Among non-Aboriginal youth, the jobless rate was significantly lower, at 13.0%, an increase of just 4.7 percentage points relative to October 2008.  
*Data Source: Statistics Canada*

### The Economy

- **The value of building permits issued by BC municipalities fell 27.3% (seasonally adjusted) in September, the largest decline in the country.** The decrease was due entirely to less planned activity in the non-residential (-9.0%) sector. Permits for institutional & government

### Did you know...

69% of Canadians aged 55 and over have Internet access at home, up markedly from 57% in 2006. *Source: Ipsos Canada*

buildings plummeted (-90.1%), and there were also significant declines in the value of permits issued for industrial (-59.1%) and commercial (-38.1%) projects. On the other hand, residential buildings (+39.0%) saw a substantial surge in activity, recovering from a 6.3% slowdown in August.

Permits were down in all four of the province's census metropolitan areas, with a 79.5% plunge in the Kelowna area leading the trend. Victoria (-10.4%) also posted a double-digit downturn in planned spending, while the province's largest city (-2.4%) and Abbotsford-Mission (-1.8%) saw more moderate decreases.

A much different pattern was seen on the National scene. Canadian permits climbed 1.6%, as heightened activity in some of the more populous provinces, such as Ontario (+5.7%), Quebec (+10.7%) and Alberta (+13.8%), was combined with further increases in other parts of the country. Manitoba, Newfoundland and BC were the only provinces to post declines. Canadian residential permits (+9.4% to \$3.2 billion) reached their highest level since September of 2008, an increase largely attributable to increased residential activity in BC and Ontario. *Data Source: Statistics Canada*

- **Total production from British Columbia's aquaculture producers, at 81,000 tonnes in 2008, remained relatively unchanged (-0.5%) from 2007 levels.** While output of shellfish (clams, oysters, mussels, scallops, etc.) dropped sharply (-27.1%), production of finfish (salmon, trout, steelhead, etc.), was higher (+3.2%).

While aquaculture output remained steady, the total dollar value of BC's aquaculture products has climbed (+4.1%). In terms of value per tonne, BC's aquaculture producers saw a 4.6% rise last year to over \$5,200/tonne from slightly more than \$5,000/tonne in 2007.

Structural changes, such as consolidations and closures, continued to affect the Canadian industry in 2008. Nationally, aquacul-

ture production dipped 5.5% in 2008 while total value of production was off 9.8%. Total exports of farmed salmon were up six percent but farmed mussel exports declined (-3%) compared to 2007. The majority of Canadian aquaculture exports (95%) are destined for the United States and much of the remaining five percent is shipped to France, Japan and Taiwan. *Data Source: S.C. Catalogue no. 23-222-XIE*

### Fertility & Parental Benefits

- **Approximately 46% of individuals in a couple relationship deem access to parental benefits to be a "very important" factor when deciding to have a child.** Women (54%) are more likely than men (38%) to report that such benefits would play a role in their decision-making. Couples who already have a child, those who are part of a dual-earner household and those who make less than \$100,000 a year are among the most likely to consider access to parental benefits when making fertility choices.

*Data Source: S.C. Catalogue no. 11-008-XIE*

### The Nation

- **Canada's hotel and motel operators continued to have a less than rosy outlook for the fourth quarter of 2009.** Of those surveyed, the balance of opinion as to whether occupancy rates will be up or down was -57, as nearly two-thirds (65%) anticipated rates to be lower than in the same quarter last year, while just eight percent expected them to rise. More hotel managers also felt that average daily room rates will be lower (58%) for the remainder of the year, while few anticipated a rise (7%).

Regional economic conditions continue to be a concern for hoteliers, with 64% citing this as a business impediment. Excess room supply (36%) and exchange rate fluctuations (27%) were also mentioned as potential hindrances. Only 11% of hoteliers reported no current difficulties. *Data Source: Statistics Canada*

## Characteristics of Immigrants and Non-Immigrants in British Columbia

### Immigrant Population

According to the 2006 Census, immigrants represented more than one quarter (27.5%) of British Columbia's population. Aside from the obvious language, ethnic and cultural differences, are immigrants really that different from non-immigrants? This analysis focuses on several Census characteristics, drawing comparisons between BC's immigrant population and its non-immigrant population. It also examines differences between established immigrants and more recent immigrants.

For the purpose of this analysis, the following terms are used:

**Well-established immigrants:** those who arrived in Canada before 1991

**Somewhat established immigrants:** those who arrived in Canada between 1991 and 1995

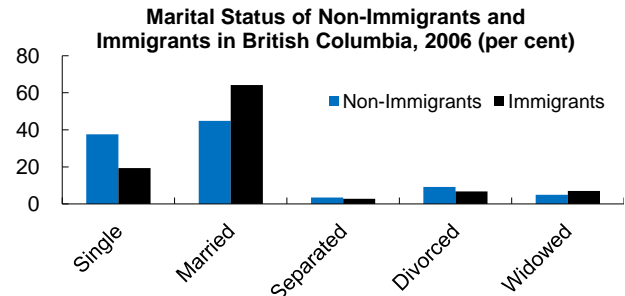

**Quite recent immigrants:** those who arrived in Canada between 1996 and 2000; and

**Very recent immigrants:** those who arrived in Canada between 2001 and 2006

### Marital Status and Family Characteristics

Among the population 15 years and over, BC's immigrants were much more likely than non-immigrants to be legally married (and not separated) and less likely to be single (never legally married), separated or divorced. However, immigrants were more likely to be widowed than non-immigrants.

Immigrants who arrived in Canada before 1991 (well-established) were more likely to be divorced than those who arrived more recently.

Source: Statistics Canada, 2006 Census

Some of the differences can be explained by the aging of well-established immigrants. One third (32.7%) of well-established immigrants were 65 years and over in 2006, compared to just 4 per cent of very recent immigrants. In comparison, for the non-immigrant population, just over one in ten (11.4%) were 65 years and over. Therefore, it is not surprising to find that nearly one tenth (9.9%) of well-established immigrants were widowed in 2006, compared to only 2.3 per cent of very recent immigrants.

On the other hand, while there were no well-established immigrants under 15 years of age, very recent immigrants had the highest percentage (17.9%) of young people under 15 among the immigrant population. In comparison, over one fifth (21.5%) of non-immigrants were under the age of 15. For immigrants overall, only 4.7 per cent were under 15.

Non-Immigrants and Immigrants by Age Group and Period of Immigration

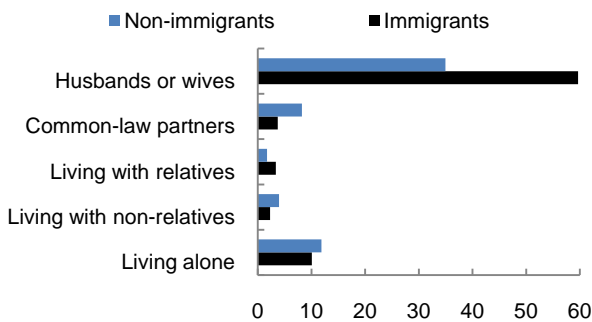

British Columbia, 2006	Under 15 15-24 25-54 55-64 65+				
	(per cent)				
Non-Immigrants	21.5	14.6	41.7	10.8	11.4
Total Immigrants	4.7	8.9	48.7	16.7	21.0
Well-established (before 1991)	0.0	2.5	40.7	24.2	32.7
Somewhat established (1991 to 1995)	2.3	15.2	59.4	10.9	12.1
Quite recent (1996 to 2000)	10.0	18.0	58.4	7.8	5.9
Very recent (2001 to 2006)	17.9	16.0	56.7	5.4	4.0

Source: Statistics Canada, 2006 Census

When looking at family status, immigrants were much more likely (59.7%) to be husbands or wives (in a Census family<sup>1</sup>) than non-immigrants (35.0%). Just as immigrants were more likely to be legally married, they were also much less likely (3.7%) to be living in a common-law relationship than non-immigrants (8.2%). However, well-established immigrants were more likely (4.6%) to be living in a common-law relationship than very recent immigrants (2.8%).

For those who were not in a census family, immigrants were twice as likely (3.4%) to be living with relatives than non-immigrants (1.7%), and less likely (2.3%) to be living with non-relatives only than non-immigrants (4.0%). Immigrants were slightly less likely to be living alone. Just over one in ten (10.1%) immigrants lived alone, compared to 11.9 per cent of non-immigrants.

**Family Status of Non-Immigrants and Immigrants in BC, 2006 (per cent)**

Source: Statistics Canada, 2006 Census

<sup>1</sup> Census families are classified into: married couples (with or without children of either or both spouses), common-law couples (with or without children of either or both partners), and lone-parent families (a single parent living with one or more of their children, regardless of the age of the children - the child must not be living with a spouse, common-law partner or one or more of their own children). A lone parent can also be living with their grandchild(ren), provided the grandchild is not living with a spouse, common-law partner or one or more of their own children, and their parents are not present.

A family person can be a spouse, a common-law partner, a lone parent, or a child in a Census family. A non-family person is not part of a Census family, and can be living with other relatives, non-relatives or alone.

Immigrants were slightly more likely (4.9%) to be lone parents than non-immigrants (4.1%). Young immigrants (those aged 15 to 24) were not accountable for this, as only 0.7 per cent were lone parents (compared to 1.3% of non-immigrants aged 15 to 24). However, among the population aged 65 and over, 5.2 per cent of immigrants were lone parents compared to 4.0 per cent of non-immigrants. Within the 25 to 54 year age group, 6.1 per cent of immigrants were lone parents compared to 7.3 per cent of non-immigrants.

**Per cent of Lone Parent Non-Immigrants and Immigrants in BC, by Age Group, 2006**

Source: Statistics Canada, 2006 Census

**Work Activity**

The labour force participation rate of immigrants aged 15 and over was considerably lower (59.8%) than that of their non-immigrant counterparts (68.7%), while their unemployment rate was slightly higher (6.1% compared to 5.9%). Immigrants were more likely (17.1%) to be self-employed than non-immigrants (13.2%) and were also slightly more likely (0.5%) than non-immigrants (0.3%) to work as unpaid family members.

**Labour Force Characteristics of the Population 15 Years and Over in BC, 2006**

	Non-Immigrants	Immigrants
Participation rate (%)	68.7	59.8
Unemployment rate (%)	5.9	6.1
Wage earners (%)	86.5	82.4
Self-employed (%)	13.2	17.1
Unpaid family workers (%)	0.3	0.5

Source: Statistics Canada, 2006 Census

The **participation rate** is the number of labour force participants expressed as a percentage of the population 15 years of age and over. The **labour force** is comprised of persons 15 years and over who were either employed or unemployed. The **unemployed** are those who were actively looking for work. The **unemployment rate** is the number of unemployed persons expressed as a percentage of the labour force.

Very recent (arrived between 2001 and 2006) immigrants aged 15 and over were more likely (65%) to participate in the labour force than well-established (arrived before 1991) immigrants (55.4%) and their unemployment rate (10.6%) was more than twice that of well-established immigrants (4.4%). In addition, very recent immigrants were less likely to be self-employed (12%) than well-established immigrants (20%) in the same age group.

Both immigrant and non-immigrant men had higher participation rates than their female counterparts, and lower unemployment rates. The unemployment rate was highest (12.7%) for female immigrants who came to Canada between 2001 and 2006, and lowest (4.1%) for male immigrants who arrived before 1991.

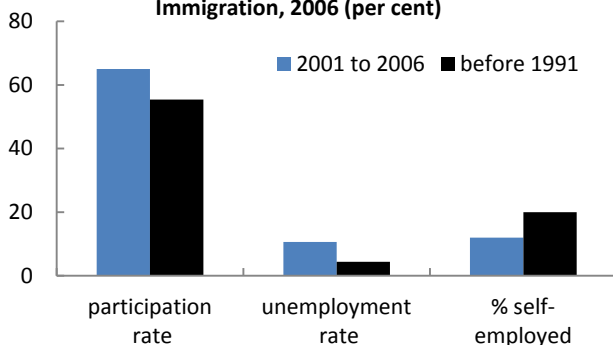

**Education**

More than one third (34.0%) of immigrants aged 25 to 54 had a university certificate, diploma or degree (bachelor’s level or above) compared to one fifth (20.4%) of non-immigrants. Immigrants were slightly less likely (10.7%) to have no certificate, diploma or degree (less than high school) than non-immigrants (11.5%).

Among immigrants aged 25 to 54, recent immigrants were more likely to have a university degree than established immigrants. Indeed, over half (52.2%) of the immigrants who arrived between 2001 and 2006 had a university degree compared to one quarter (24.5%) of immigrants who arrived in Canada before 1991.

When looking at gender, a higher percentage of 25 to 54 year old non-immigrant women (22.1%) had some kind of university certification compared to non-immigrant men (18.7%). Among immigrants, however, the tables are turned, with a higher proportion of immigrant men (35.7%) holding university credentials compared to immigrant women (32.5%) in the same age group. This gap is even wider among the more recent immigrants. Although nearly half (48.7%) of the women aged 25 to 54 who immigrated to Canada between 2001 and 2006 had university credentials, among their male counterparts, 56.4 per cent had a university certificate, diploma or degree (bachelor’s level or above).

Source: Statistics Canada, 2006 Census

**Per cent of BC's Population Aged 25 to 54 with University Credentials (by immigration status, period of immigration and sex) 2006**

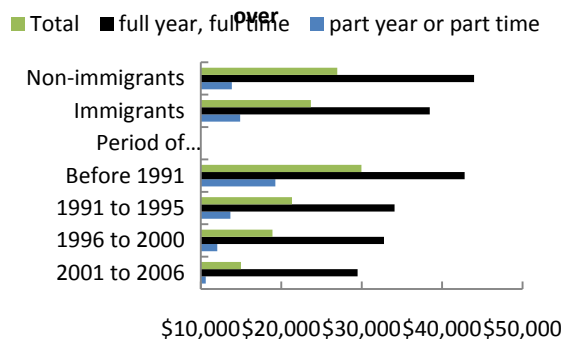

Source: Statistics Canada, 2006 Census

**Earnings and Income**

Despite higher education credentials, immigrants took home only 88% of the earnings of non-immigrants. In 2005, the median employment income for immigrants aged 15 and over was \$23,693 compared to \$26,974 for non-immigrants. For those working full year/full time, the disparity was even greater. While the median employment income for immigrants working full year/full time was \$38,469, for non-immigrants it was \$43,973. However, immigrants who worked part year or part time fared better. Their median employment income in 2005 was higher (\$14,901) than that of non-immigrants (\$13,849).

When comparing immigrants by period of immigration, established immigrants took home a bigger paycheque than recent immigrants, whether they worked full time/full year or part time/part year. Well-established (arrived before 1991) immigrants working full time/full year had a 2005 median employment income (\$42,798) close to that of non-immigrants (\$43,973). However, very recent (arrived between 2001 and 2006) immigrants had a median employment income of only \$29,484 in 2005.

**2005 Median Employment Income of BC Non-immigrants and Immigrants, by Period of Immigration and Work Activity, 15 years and over**

Source: Statistics Canada, 2006 Census

While wages and salaries accounted for 71.1 per cent of total income for non-immigrants, they were responsible for only 64.5 per cent of total income

for immigrants. However, the proportion of income from self-employment was higher for immigrants (6.2%) than it was for non-immigrants (5.6%). Immigrants also had higher percentages of investment income and pension income.

Immigrants had a considerably higher percentage of income from government transfer payments (13.3%) than non-immigrants (9.7%). For established immigrants, income from pensions and GIS (guaranteed income supplement) were the main contributors, while for more recent immigrants, child benefits and employment insurance benefits provided the largest shares.

Overall, the median total income of non-immigrants in 2005 was \$27,063 compared to \$21,373 for immigrants. Well-established immigrants (\$26,328) had twice the median total income of very recent immigrants (\$13,417) in 2005.

**Composition of Total Income in 2005 for BC Non-immigrants and Immigrants, by Period of Immigration, 15 years and over**

	Non-immigrants	Immigrants
Wages and salaries %	71.1	64.5
Self-employment income %	5.6	6.2
Investment income %	5.0	6.7
Pensions/Superannuation/Annuities %	6.6	7.2
Other money income %	1.9	2.2
Government transfer payments %	9.7	13.3
<b>Median income \$</b>	<b>27,063</b>	<b>21,373</b>

Source: Statistics Canada, 2006 Census

**Low Income**

The prevalence of low income was much more pronounced for the immigrant population. On an after-tax basis, immigrants in economic families<sup>2</sup> were twice as likely (16%) to be living in straitened circumstances in 2005 as non-immigrants (7.5%). Well-established immigrants (arrived before 1991) in economic families fared best, with a low income incidence of

<sup>2</sup> Economic family: refers to a group of two or more persons who live in the same dwelling and are related to each other by blood, marriage, common-law or adoption. For the 2006 Census, foster children are considered economic family persons. The economic family is broader in scope than the Census family.

only 6.7 per cent. In comparison, 34.2 per cent of very recent immigrants (arrived between 2001 and 2006) in economic families were considered low income.

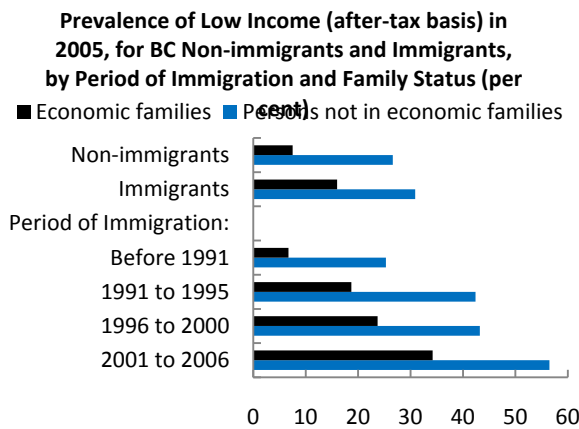

For persons not in economic families, the incidence of low income (after-tax basis) was much greater for both immigrants (30.9%) and non-immigrants (26.6%). Again, well-established immigrants fared much better, with one quarter (25.3%) living in low income circumstances compared to more than half (56.5%) of very recent immigrants.

*lies based upon family expenditure and income after tax. Consequently, the low income after-tax cut-offs are set at after-tax income levels, where 20 percentage points more of after-tax income than the average is spent on food, shelter and clothing.*

– Statistics Canada

**Conclusion**

It is clear that more than a good education is required for a successful immigration outcome. This is especially true for the most recent immigrants, who are the most educated, yet take home the least earnings. While it may take time to gain work experience, master the English language, or upgrade qualifications, once established, immigrants out-perform the non-immigrant population in many areas, indicating that the going should get easier for immigrants the longer they remain in Canada.

Source: Statistics Canada, 2006 Census

**Measurement of Low Income**

*Measures of low income known as low income cut-offs (LICOs) are based on Census income data and family expenditure patterns.*

*Expenditure patterns indicate that Canadian families spend about 50% of their total income on food, shelter and clothing. It is arbitrarily estimated that families spending 70% or more of their income (20 percentage points more than the average) on these basic necessities would be in 'straitened' circumstances.*

*The initial LICOs were based upon the total income, before tax, of families and persons 15 years and over not in economic families. In a similar fashion to the derivation of low income cut-offs based upon total income, cut-offs are estimated independently for economic families and persons not in economic fami-*

### Population Highlights - NEW

Population Highlights is a new BC Stats periodical that replaces both Migration Highlights and Immigration Highlights. This release provides detailed current information on population flows between British Columbia and other provinces/territories and the rest of the world, as well as other components of population change. Also, a feature article provides additional analysis on a topic of interest related to migration or immigration issues.

[www.bcstats.gov.bc.ca/pubs/pr\\_pop.asp](http://www.bcstats.gov.bc.ca/pubs/pr_pop.asp)

### Small Business Profile 2009

The 2009 Edition of the annual profile of small business in British Columbia is now available. The report provides information on British Columbia's small businesses, including number of businesses, employment and small business' contribution to the provincial economy.

[www.bcstats.gov.bc.ca/data/bus\\_stat/busind/sm\\_bus.asp#sbp](http://www.bcstats.gov.bc.ca/data/bus_stat/busind/sm_bus.asp#sbp)

### Population & Household Projections

The latest British Columbia population projections (PEOPLE 34) are now available. BC Stats produces population and household projections for British Columbia and for a number of sub-provincial geographies in the province, including: Development Regions, Regional Districts, Health Authorities, Health Service Delivery Areas, Local Health Areas, College Regions, School Districts, and six Special Regions.
